

Lean Canvas

AI-Powered Career Opportunity Filtering System

01 Problem

Users receive many job/internship emails but cannot quickly understand or filter them.

No system exists to automatically filter jobs based on personal preferences.

Existing Alternatives

- Job platforms like LinkedIn, Internshala, Naukri.
- Manual email checking by users.

- Email notifications and job portals.
- Personal judgment to filter opportunities.

02 Solution

We use AI to read emails, extract job details, and filter them automatically.

Users get only relevant job opportunities without manual effort.

03 Key Metrics

1. Number of emails processed automatically.
2. Accuracy of job detection and relevance filtering

1. High percentage of relevant jobs stored in selected sheet.
2. Reduction in manual effort and time spent by users.

04 Unique Value Proposition

AI-based automatic filtering of job emails

Personalized matching based on user profile

Real-time processing with no manual work

Structured storage of both selected and rejected jobs

05 Unfair Advantage

- Custom AI workflow with personalized decision logic
- Integration of multiple steps (extraction + filtering + storage)

- Salary-based filtering logic (like ≥ 10 LPA condition)
- Separate sheets for relevant and non-relevant jobs

06 Channels

- Gmail integration for email input
- Google Sheets for output display

- Future integration with job platforms
- Automation tools like n8n workflows

07 Customer Segments

- College students looking for jobs or internships
- Freshers applying for entry-level roles

- People who receive frequent job emails
- Users who want automated career assistance

Early Adopters

- Students actively applying for jobs/internships
- Users who receive frequent job alerts

- Tech-savvy users comfortable with automation
- People who want to save time in job search

08 Cost Structure

API costs (OpenAI usage)

Cloud and workflow automation costs (n8n)

Development and maintenance

Data storage (Google Sheets / database)

09 Revenue Streams

Subscription-based premium features

API usage or SaaS-based model

Partnership with job platforms

Resume optimization or career services
